Purpose designed systems

At Robertson we take special pride in our ability to meet the requirements of clients seeking specific solutions for special buildings. This service may include the reconfiguration of existing systems or the design, production and testing of new products.

We are also able to adapt our products to new purposes, providing systems that make use of the principles of natural ventilation.

Light Vents

Robertson exhaust ventilators and inlet systems can be built to provide significant levels of natural lighting through the:

Inclusion of transparent materials

Diffusion of reflected light entering the building

Provision of direct opening to outside (while maintaining weather protection).
